Software to match your needs

Mantra comes with a robust built-in database - you do not need to install separate software. Mantra's modular approach gives you a system that matches your needs.

The maintenance management system comprises the asset register, job control & planned maintenance module, job tracking, resource and stock control modules.

You can add other features such as log-in with user identification and password protection by going to

www.bmstech.com/mantra/products.htm

Multi-user

You can upgrade from a single-user to a network version - without changing your existing data. This allows all staff to work on the same data simultaneously – so while the maintenance manager

is issuing jobs any other staff member may be entering a job request.

Security

When you have the Manager program each user may be granted or denied access to features which can be password protected - so you can allow some access to jobs and others access to stock - and let just one person delete assets, say.

Hazardous areas

If you have equipment in locations with potentially flammable atmospheres you should add the hazardous area module.
